

CS-03 — Safe-Lab Evidence

Phishing Awareness Kit • Ismail Victor Elias

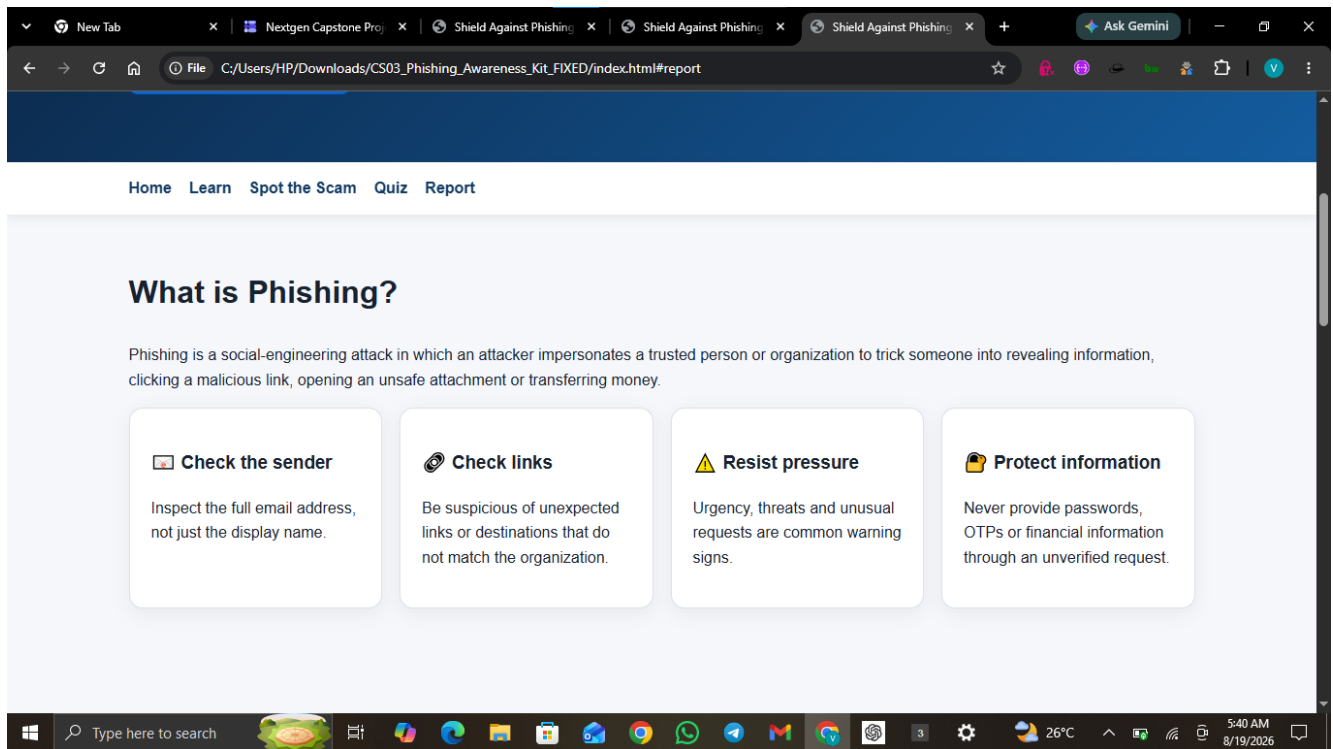

Purpose: Evidence of the working phishing-awareness MVP using fictional training content. No real credentials or sensitive information are collected.

Evidence Summary

The evidence demonstrates the core workflow: awareness training, a fictional phishing simulation, red-flag feedback, an interactive five-question quiz, an automated awareness score, and clear STOP → CHECK → VERIFY → REPORT guidance.

Safety statement: This project is for authorized defensive security awareness training only. No real-world phishing campaign, credential harvesting, or unauthorized testing is part of this MVP.
